

## Specialized Piping – Individual solutions in stainless steel

Possibilities of specialized piping processes:

Welded stainless steel pipes with special...	Possibilities and solutions
...material properties	influence on structure, optimisation of hardness, yield strength, strength and elongation values
...geometries	special sizes, square, rectangular, triangular, hexagonal, oval, elliptical pipes etc.
...tolerances of form and position	calibration of exact inside and outside diameters, specified roundness/ovality, true running, straightness, squareness
...surfaces	material from cold or hot rolled coils, rolling of weld bead, grinding of outside and inside surfaces, shot peening, roller burnishing
...machining by Laser	by welding, cutting, cutting of contours
...machining	by turning, milling, boring
...forming	by integrated bends, hydroforming, drawing, expansion, beading
